

## **Tualatin Police Mobile App. Instructions**

The Mobile App can be downloaded on any Android, Apple, or Windows device. Use the attached QR scan code to download and hit “Get”-then install. Or go to your Apple Store or Google Play site on your device and search for “Tualatin Police”. After opening the Mobile App, you will be asked to “Allow” or “Don’t Allow” Push Notification. It is our recommendation that you “Allow” Push Notifications so you will receive alerts from our department. The next step is to touch on the Gear Symbol (\*) in the upper right corner to go to the Mobile App “Settings”.

### **Notifications:**

Decide how and when you want to be notified with alerts.

### **My Profile:**

Please enter a name and a phone number and/or email, then click on “Save.” This information is only sent to the Tualatin Police Supervisors and only if you send a tip or compliment. The information is not seen by the public Mobile App users.

### **Share:**

This gives you the option to share the Mobile App with other people you think would like to have it.

### **Data Sync:**

Select how often you want the Mobile App to be updated. At anytime you can click on the “Sync now” button to have the App instantly updated.

Touch on the Gear Symbol (\*) to go back to the Mobile App main screen and explore the optional buttons available.

After you have updated your “Settings” on the Mobile App, you will need to update your “Settings” on your device. Go to your general “Settings” on your device and locate the Mobile App icon for Tualatin Police. Select the options you want for Location services and Notifications. This is how you can ensure you receive all “Push Notification Alerts” from the Tualatin Police Department.
